# Technical Datasheet Capitata Pro

#### **Presentation**

Capitata Pro is a concentrated formulation of microparticles containing an aggregation pheromone of Ceratitis capitata.

The formulation is made for use in monitoring.

## **Composition of the formulation:**

This formulation is an aqueous formulation, containing biosourced and biodegradable materials such as sun flower oil, packaged in pouches.

Each dispenser contains 2 gram of the active ingredient trimedlure as well as inert ingredients: Antioxidant

### **System Specification:**

Name: Capitata Pro

Common active ingredient name: Trimedlure

CAS: 12002-53-8

Content: 2g of pheromone mixture, stabilizer.

#### How to use it?

The product should be placed in the field before the emergence of the first generation and until the end of the season.

Open the heat-sealed Aluminium pouch immediately before application.

Put it in the recommended trap.

Trap/dispenser positionning

Traps should be place at 1,5m high. A density of 1 to 2 traps per hectare is recommended for monitoring

#### How to handle it?

Capitata Pro is made in a very safe to handle dispenser.

It contains no hazardous material.

Its packaging is designed to prevent direct contact with the product.

# **Storage conditions:**

The formulation must be kept in a cool well-ventilated area in its original packaging, at a temperature < 30°C. Under these conditions it may be stored for **30 months**.

## **Monitoring**

Insects counting should occur weekly and more often when insect population pressure in high.

# Replacement

Dispensers should be replaced every **60 days** or as recommended by the agricultural authorities
